Dear John:

On March 17 the elevation of Utah Lake reached 4489.045, compromise elevation, and the radial gates to the Jordan River were opened. On this date approximately 97,000 acre-feet of CUP Strawberry import water was being stored in Utah Lake on a space available basis subject to incremental evaporation. The following table accounts for Strawberry imports to Utah Lake and incremental evaporation on a monthly basis.

As the space available in Utah Lake decreases CUP import water will spill out through the Jordan River. Utah Lake has crossed the conversion line this year. We request that you convert all system storage in Deer Creek and Jordanelle reservoirs to priority storage.

Please contact me if you have any questions.

Sincerely yours,
